

Better mousetrap. Check. Now what?

TECHNOLOGY TRANSFER AT SIUC

Maybe you've come up with an invention—a new product, process, or material. Or perhaps you have questions about copyright issues in a multimedia project, a joint scholarly endeavor, or some other enterprise. **SIUC's Technology Transfer program, administered through ORDA, is here to help.**

Protecting your intellectual property:

If you think your research may lead to potentially patentable results, or if you have copyright concerns, contact ORDA. We work with Legal Counsel to determine the applicability of SIUC's Intellectual Property Policy to particular situations. We can assess the impact of publication or other public disclosures on your intellectual property rights. We also negotiate grant agreements aimed at protecting your intellectual property. Industry contracts and material transfer agreements are an important focus of our effort.

Patenting and commercialization:

We provide invention marketing assistance, valuation, oversight of the patent application process, and license negotiation/execution services. In conjunction with the Southern Illinois Research Park (www.sirpark.com), we also can assist faculty interested in starting new businesses based on University technology.
